Derived from: Calcium Nitrate

Directions For Use

General Application Rates when leaf and soil tests are not available:

Sodium Flush: 1 to 2 gallons per acre.

Moderate Micronutrient Deficiency: 2 to 4 quarts per acre.

Heavy Micronutrient Deficiency: 1 to 2 gallons per acre.

Vegetable and Row Crops: 1 to 2 quarts per acre per application.

Citrus and Fruit Crops: 1 to 2 gallons per acre in sufficient water to obtain a uniform coverage of the citrus foliage. If deficiencies are severe, it may be necessary for a follow up spray in about 90 days at half the above dosage.

NOTE: It is recommended that all ground applications should be made with a minimum of 50 gallons of water per acre.

Air and Low Volume: Use a minimum of 15 gallons of water per acre in aerial applications. Use a minimum of 20 gallons with low volume applicators.
